Download

Java

https://www.oracle.com/in/java/technologies/downloads/#jdk19-windows - MSI Installer

Eclipse

https://www.eclipse.org/downloads/ - Eclipse IDE for Enterprise Java and Web Developers

3. Create Web services

Tomcat - https://tomcat.apache.org/download-80.cgi - Binary Distribution -> Core -> zip

Exp 1: Create Web Service

addClass.java

```
package test1Project;

public class addClass {
	public int add(int a, int b)
	{
		return a+b;
	}

}
```

File — New — Dynamic Web Project — give project name & set Dynamic Web Module Version to 2.5 & Select checkbox against Add project to an EAR ~~ click on Next — Next — Finish

Servers (available on the horizontal tab across the workspace, lower half of screen) — Click on the displayed text “no servers available…” — Apache (open dropdown) — Tomcat v8.5 — Next — click on Browse — go to where tomcat was extracted in the downloads (do not enter the bin) — Next — click on project name & click Add (or just click on Add All) — Finish

Right click on your projectname — New — Class — enter name : addClass — Finish

Put code in [addClass.java] file and save file

In the Servers section - right click on the line “Tomacat v8.5 Server at localhost” — Start — Allow Access

Right click on addClass java file — New — Other… — scroll down to Web Services (open dropdown menu) — select Web Service (NOT the client one) — Next — drag up the blue bar under Client type to max — Next — Next — OK in error dialog — Next — Yes to All — Launch

Browser will open - click on add under the operations table

Get back to Eclipse — Finish (on the Web Service window) — Browser will open - Error : since frontend has not been developed

Exp 2: RIM Demo

IHello.java

```
import java.rmi.*;

public interface IHello extends Remote{

public String message() throws RemoteException;

}
```

HelloImpl.java

```
import java.rmi.*;
import java.rmi.server.*;

public class HelloImpl extends UnicastRemoteObject

implements IHello{

      public HelloImpl() throws RemoteException {
//There is no action need in this moment.
}

      public String message() throws RemoteException {

            return ("Hello");
}
}
```

HelloServer.java

```
import java.rmi.*;

public class HelloServer {

      private static final String host = "localhost";

      public static void main(String[] args) throws Exception {
//** Step 1
//** Declare a reference for the object that will be implemented

            HelloImpl temp = new HelloImpl();
//** Step 2
//** Declare a string variable for holding the URL of the object&#39;s name

            String rmiObjectName = "rmi://" + host + "/Hello";
//Step 3
//Binding the object reference to the object name.

            Naming.rebind(rmiObjectName, temp);
//Step 4
//Tell to the user that the process is completed.
```

```
            System.out.println("Binding complete...\n");
}
}
```

HelloClient.java

```
import java.rmi.ConnectException;
import java.rmi.Naming;

public class HelloClient
{

      private static final String host = "localhost";

      public static void main(String[] args)

      {

            try

            {
//We obtain a reference to the object from the registry and next,
//it will be typecasted into the most appropiate type.

                  IHello greeting_message = (IHello)
Naming.lookup("rmi://"+ host + "/Hello");
//Next, we will use the above reference to invoke the remote
//object method.

                  System.out.println("Message
received:"+greeting_message.message());

            }

            catch (ConnectException conEx)

            {

                  System.out.println("Unable to connect to server!");

                  System.exit(1);

            }

            catch (Exception ex)

            {

                  ex.printStackTrace();

                  System.exit(1);

            }

      }
}
```

1. File – New – Project – Java Project – Next – put project name : RMIdemo – Next – Finish

2. Right click on RMIdemo— New — Interface —enter name : IHello — Finish

3. Right click on IHello . java — Show in Local Terminal — Terminal

in the terminal compile the file: javac IHello.java

4. Right click on RMIdemo— New — Class —enter name : HelloImpl — Finish
5. repeat compilation step on HelloImpl as well
6. Repeat above two steps for HelloClient and HelloServer files
7. In the terminal put - start rmiregistry — press Enter
8. Next, run the HelloClient file in the terminal put - java [HelloClient.java] — Enter —- scroll up to see Hello printed

Exp 3: middleware

Server.java

```
package middleware;

public class Server implements interfaceCalculator{
public int add(int a,int b){
return a+b;
}
public int sub(int a,int b){
return a-b;
}
}
```

interfaceCalculator.java

```
package middleware;

public interface interfaceCalculator{
public int add(int a,int b);
public int sub(int a,int b);
}
```

Client.java

```
package middleware;

public class Client {
public static void main(String [] args)
{
interfaceCalculator i=new Server();
System.out.println(i.add(12,13));
System.out.println(i.sub(12,12));
}
}
```

File — New — Project — Java Project — Next — put project name : middleware — Next — Finish

Right click on middleware — New — Class —enter name : Server — Finish

repeat for Client and interfaceCalculator files

Run the Client file (green play button for run)

Exp 4: Wrapper

Receiver.java

```
package wrapper;

import java.net.*;
public class Receiver{
public static void main(String[] args) throws Exception {
System.out.println("Waiting for Sender to send the Message");
DatagramSocket ds = new DatagramSocket(3000);
byte[] buf = new byte[1024];
DatagramPacket dp = new DatagramPacket(buf, 1024);
ds.receive(dp);
String str = new String(dp.getData(), 0, dp.getLength());
System.out.println(str);
ds.close();
System.out.println("Message received successfully");
}
}
```

Sender.java

```
package wrapper;

import java.net.*;
import java.util.*;
public class Sender{
public static void main(String[] args) throws Exception {
Scanner scn=new Scanner(System.in);
System.out.println("Enter your message : ");
String str= scn.nextLine();
DatagramSocket ds = new DatagramSocket();
InetAddress ip = InetAddress.getByName("127.0.0.1");
DatagramPacket dp = new DatagramPacket(str.getBytes(), str.length(), ip, 3000);
ds.send(dp);
ds.close();
System.out.println("Message has been sent to Receiver Class Please Check: "+ str);
}
}
```

File — New — Project — Java Project — Next — put project name : wrapper — Next — Finish

Right click on wrapper — New — Class —enter name : Sender — Finish

repeat for Receiver file

click on Receiver and click on run (the green play button)

click on Sender and click on run (the green play button)

Enter your message
